

Critto

Identify South Africa's wildlife from a photo.

AMD Developer Hackathon: ACT II • Track 3 (Unicorn)

Aidan Dean • Tanner Mundell

THE PROBLEM

Knowing a name isn't knowing the animal

1

Hard to identify

Faced with an unfamiliar bird, mammal, or snake, most people have no idea what they're looking at.

2

A name isn't enough

Even when you get a name, you don't learn anything about it — or remember it tomorrow.

3

Nothing pulls you back

No reason to keep exploring, collecting, or caring about the wildlife around you.

People want to understand the wildlife around them — not just tag it and move on.

THE SOLUTION

Snap it. Know it. Collect it.

1

Snap

Take or upload a photo of any bird, mammal, or reptile.

2

Know

Instant species ID plus a rich, source-backed field-guide entry.

3

Collect

Earn the card, grow your collection, chase coins and fill your journal.

A South African field guide in your pocket — that turns getting outside into a game.

HOW IT WORKS

One photo, a full field guide

Identification and field-guide content are generated on demand and grounded in real sources (Wikipedia + IUCN), with citations.

USE OF AMD

Built on AMD

Inference via Fireworks AI

Both endpoints call Minimax M3 on Fireworks AI — AMD's inference partner, accessed through the AMD AI Developer Program and powered by AMD Instinct GPUs.

BioCLIP on AMD GPU (ROCm)

Our specialised classifier is validated directly on an AMD GPU via ROCm — 99.95% on a test image. The high-accuracy vision path.

AMD on two fronts: our classifier on an AMD GPU (ROCm), and inference via Fireworks AI — AMD's partner.

PROOF

Real recognition. Grounded content.

99.95%

BioCLIP on AMD
GPU (test)

150

curated SA
species

3

classes: birds,
mammals, reptiles

2

AMD platforms:
AMD GPU + Fireworks

Field-guide entries are grounded in Wikipedia + IUCN and cite their sources — no invented facts.

OUR DIFFERENCE

We go deeper

A name is just the start.

Critto helps you actually learn about the wildlife around you — and keeps you coming back to discover more.

Rich, cited field guides

Habitat, diet, range, size, conservation — from real sources.

Learn as you collect

Rarity, sets, and your Journal make it stick.

Conservation built in

See what's threatened and why it matters.

ENGAGEMENT

A collection game with a conservation heart

Rarity cards

Common → Legendary, weighted by how rare and threatened a species is.

Coins

Complete sets — the Big Five, Endangered Guardians, class masters.

Your Journal

A running record of every encounter, synced across devices.

Read-aloud guide

Listen to any species' field-guide entry, hands-free.

Rarity rewards the rare and the threatened — turning spotting into stewardship.

MARKET

Who it's for

Tourists & safari-goers

Millions visit SA for wildlife each year.

Birders & nature lovers

A passionate, list-keeping community.

Schools & education

Hands-on, local biodiversity learning.

Conservation & citizen science

Sightings that build awareness and data.

South Africa draws millions of wildlife tourists a year — Critto is their pocket guide, and a gateway to local conservation.

ROADMAP

Where Critto goes next

1

Now

SA image ID + collection — live now

2

Next

Sound ID — identify birds by their call

3

Then

Beyond SA — more species and regions

4

Later

Social play + verified sightings

TRY IT

See it for yourself

It's live — try it right now.
